

# CENTER FOR BIOMEDICAL RESEARCH TRANSPARENCY

## 2019 Biomedical Transparency Summit Europe

Enhancing communication of negative and inconclusive findings across biomedical research.

Many experimental results never see the light of day - particularly when an expected effect is not observed. Negative and inconclusive results in biomedical research have significant value to inform future research designs, funding decisions, and save study participants from avoidable risks.

A rapidly evolving ecosystem of initiatives and tools exists to assist biomedical researchers improve the transparency of their research efforts. The Biomedical Transparency Summit will bring together leaders from this ecosystem and representatives of private and publicly funded research - to publish a roadmap of tools available for distribution across the community of biomedical researchers.
